

ACDC RISING STARS CELEBRATION SEMINARS!

Join us in May to celebrate these rising stars in Measurement Science. The Analytical Chemistry Diversity Colloquium presents cutting-edge measurement research seminars each month that focused on the diversity of scientists and the tools needed to quantify the world around us. Interested in learning more? Check out our website to register for these talks:

————— **May 11th, from 1:00 - 2:00 PM EST** —————

Optimization of paper-based lateral flow assay employing ion concentration polarization for analyte enrichment

Kira Rahn

Iowa State University

Harmonizing and calibrating quantitative mass spectrometry experiments

Lindsay Pino

University of Pennsylvania

————— **May 19th, from 1:00 - 2:30 PM EST** —————

Detection of Food Contaminants via Linear Polymer Affinity Agents and Surface-Enhanced Raman Scattering

Rebeca (Becky) Rodriguez

University of Minnesota

Selective Analysis of Nucleic Acids from Complex Biological Samples with Molecular-Beacon Loop-Mediated Isothermal Amplification and Solid-Phase Microextraction

Marcelino Varona

Iowa State University

Understanding Electrostatic Effects at Manganese Complexes to Control Reactivity

Nadia Leonard

University of California, Irvine
